PROFESSIONAL SUMMARY

Data Science undergraduate at SLIIT with hands-on experience building full-stack web applications, REST APIs, and machine learning solutions. Proficient in Java, JavaScript, TypeScript, Python, and SQL, with project experience in React, Node.js, Express, Spring Boot, FastAPI, and MySQL. Hackathon champion seeking a Software Engineering internship to write clean, maintainable code and deliver real-world web applications.

EDUCATION

SLIIT (Sri Lanka Institute of Information Technology), Malabe Jun 2024 – Jun 2028

Bachelor of Science (Hons) in Data Science | CGPA: 3.5/4.0 | Dean's List: Year 1, Semester 2

Relevant Coursework: Machine Learning (85%), Software Engineering (92%), Data Visualization (87%), Object-Oriented Programming (85%), Database Systems (81%), Data Structures & Algorithms (80%)

Royal College, Colombo 2022

GCE Advanced Level, Physical Science Stream: Physics, Chemistry, Combined Mathematics

AWARDS & ACHIEVEMENTS

Mini Hackathon 2026: 1st Place (Champion), SLIIT Aug 2026

CodeArena 2026 (KDU Hackathon): Top 10 Finalist Team, KDU Sep 2026

Dean's List Award, Year 1 Semester 2, SLIIT Jan 2026

PROJECTS

StudyAI: AI-Powered Grounded Learning Platform Sep 2026

Full-Stack & AI Developer

- Built a full-stack MERN learning platform (React, Express, Node.js, MongoDB) with REST APIs for scalable document processing, and context-aware MCQ and flashcard generation using Google Gemini for personalized learning.
- Engineered a Retrieval-Augmented Generation (RAG) pipeline using semantic document chunking, Google text-embedding-004 vector embeddings, and cosine similarity search to ground AI responses in verified academic materials with source citations.

  Tech Stack: React, Node.js, Express, MongoDB, REST APIs, Python, RAG, Vector Embeddings, Google Gemini API

AgriShield AI: Crop Disease Early Warning System Sep 2026 – Oct 2026

Machine Learning & Data Science Developer

- Developed an end-to-end platform giving farmers real-time crop disease diagnosis, using React, FastAPI, and PostgreSQL, with an EfficientNet-B0 classifier (PyTorch transfer learning) trained on 20K+ PlantVillage images across 15 disease classes and OpenCV HSV severity analysis.
- Built an outbreak detection service with Leaflet geospatial risk mapping, a human-in-the-loop triage system that escalates low-confidence, high-severity, or high-risk cases to officers, and Google Gemini advice in English, Sinhala, and Tamil using Open-Meteo weather risk.

  Tech Stack: Python, PyTorch, OpenCV, Scikit-learn, FastAPI, React, Leaflet, TailwindCSS, PostgreSQL (Supabase), Google Gemini API

Smart Hardware Inventory & Sales Management System with ML-Based Stock Prediction Jan 2026 – Jun 2026

Full-Stack & Machine Learning Developer

- Developed a dual-model restocking system with Scikit-learn and XGBoost that predicts restock needs and order quantity, integrated into a Java Spring Boot backend via Joblib and ProcessBuilder to generate real-time JSON recommendations and PDF action plans.
- Built a Discount & Promotion module with full CRUD, scheduled start/end dates, live price synchronization, and an announcement system with image support; contributed to frontend development and PayHere Sandbox payment integration.

  Tech Stack: Java, Spring Boot, MySQL, JWT Authentication, REST APIs, Scikit-learn, XGBoost, Joblib, PayHere Sandbox, Git

LankaRail – Web-Based Train Reservation System
Backend Developer | Six-Member Team Project, Software Engineering Module (Y2S1)

- Contributed to a full-stack train reservation system using Spring Boot, MySQL, Bootstrap, and JWT authentication, enabling passengers to search trains, book tickets, manage reservations, and generate e-tickets, with role-based access for passengers and administrators.
- Developed the Train Management module with CRUD operations, REST API development, data validation, and backend integration; validated API endpoints with Postman and collaborated through GitHub using Agile practices.
  Tech Stack: Java, Spring Boot, MySQL, Bootstrap, JWT Authentication, REST APIs, Postman, GitHub

Online Music Store & Streaming Platform
Full-Stack Developer

- Architected a full-stack music streaming and social platform with role-based access for Listeners, Artists, and Administrators, featuring a custom audio player (play/pause, seek, volume) in React (Vite) and a relational MySQL schema using Hibernate for users, albums, songs, playlists, and comments.
- Built a Java Spring Boot RESTful backend with multipart file uploads and CORS, an artist dashboard with real-time stream tracking, and social features including track likes, playlist creation, and a real-time commenting system with edit/delete.
  Tech Stack: Java, Spring Boot, Spring Data JPA, Hibernate, React.js (Vite), MySQL, REST APIs, CSS3

CERTIFICATIONS

Get Started with Databricks for Data Engineering, Databricks — Jul 2026
AI/ML Engineer, Stage 2, SLIIT — Jun 2026
AI/ML Engineer, Stage 1, SLIIT — Jun 2026

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, SQL, R
Frontend: React, Next.js, React Native, HTML5, CSS3, TailwindCSS, Bootstrap, Vite
Backend & APIs: Node.js, Express, Spring Boot, Spring Data JPA, Hibernate, FastAPI, REST APIs, JWT Authentication
Databases: MySQL, PostgreSQL, MongoDB, SQL Server (MSSQL)
Machine Learning & Data: Scikit-learn, XGBoost, PyTorch, OpenCV, Pandas, NumPy, RAG, Machine Learning, Deep Learning
Tools & Practices: Git, GitHub, Postman, Agile Development, Linux, Jupyter Notebook, Google Colab

LANGUAGES

English, Sinhala
